Norway; the "ocean state"

- Area
  - Waters under Norwegian jurisdiction:
     2,3 million km<sup>2</sup>
  - Land territory:
     385 000 km<sup>2</sup>
  - Value creation
    - Petroleum, aquaculture and fisheries are the main exports and foundation our welfare

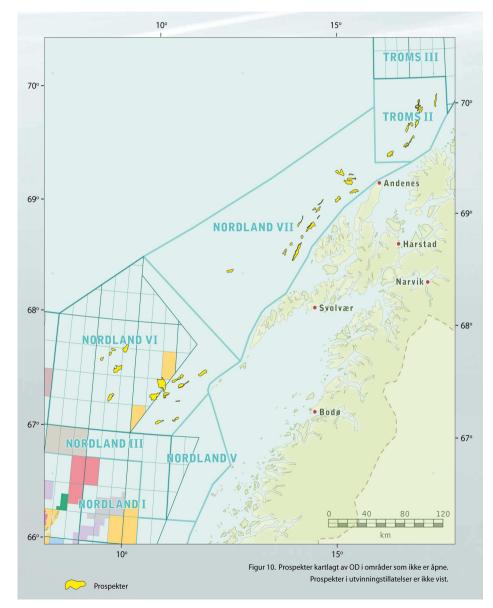

## A growing understanding for integrated ocean management

- Response to challenges:
  - Climate change, pollution, increasing economic activity
- The cumulative impacts of various uses of and pressures on the marine environment necessitate integrated approaches to its management.
- Integrated ocean management is addressed through a number of concepts:
  - Marine Spatial Planning, Ocean Zoning, Ecosystembased ocean management (Ecosystem Approach)etc.

## Decline in oil/gas production: need for new fields to fill the gap

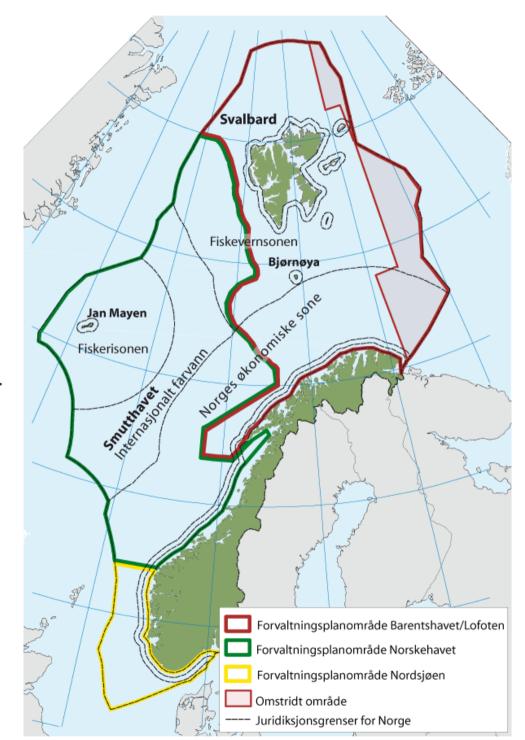

- Unexplored areas off Northern Norway
- Most promising at Lofoten Vesterålen
- Need infrastructure moving northward to access arctic fields
- Necessitates implementing integrated ocean management in the areas

The Norwegian Management plans

- Initiated in 2001
- Barents sea: 2006
  - Revision in 2010/2011
- Norwegian sea: 2009North Sea: planned

for 2013

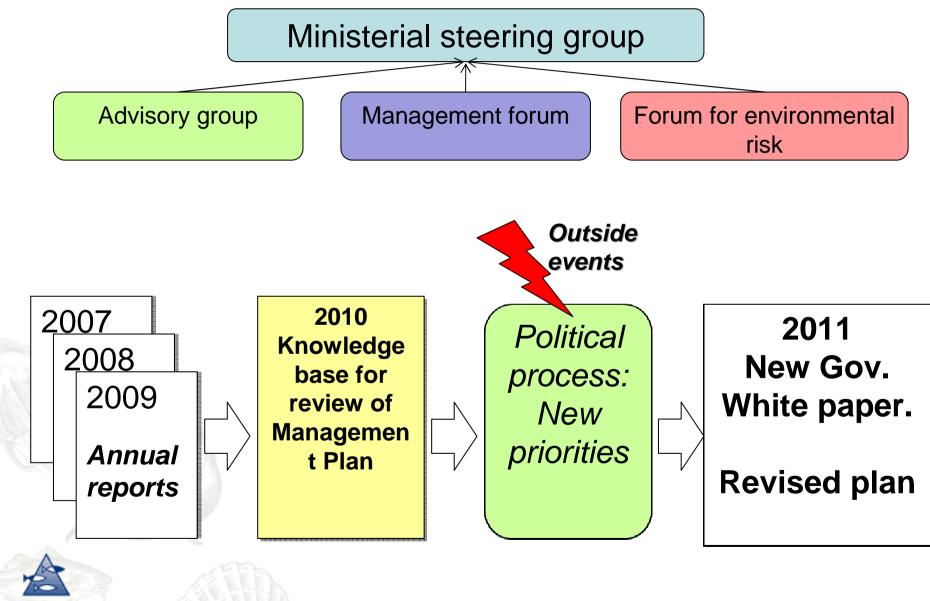

### The planning process

<ul> <li>Phase 1</li> <li>Scoping</li> <li>Status reports: <ul> <li>Environment and resources</li> <li>Valuable area</li> <li>Socioecomnomic aspects</li> <li>Economic activities</li> </ul> </li> </ul>	<ul> <li>Phase 2</li> <li>Assments of impacts of:</li> <li>Oil and gas</li> <li>Shipping</li> <li>Fisheries</li> <li>External influences</li> <li>Consulation with public on mandate and final reports</li> </ul>	<ul> <li>Phase 3</li> <li>Aggregated analyses:</li> <li>Otal impact</li> <li>Management goals</li> <li>Gaps in knowledge</li> <li>Vulnerable areas and conflic of interests</li> <li>Stakeholder conference</li> </ul>	Management plan
	Development of Ecological Quality Objectives		M

### Implementation and review phase

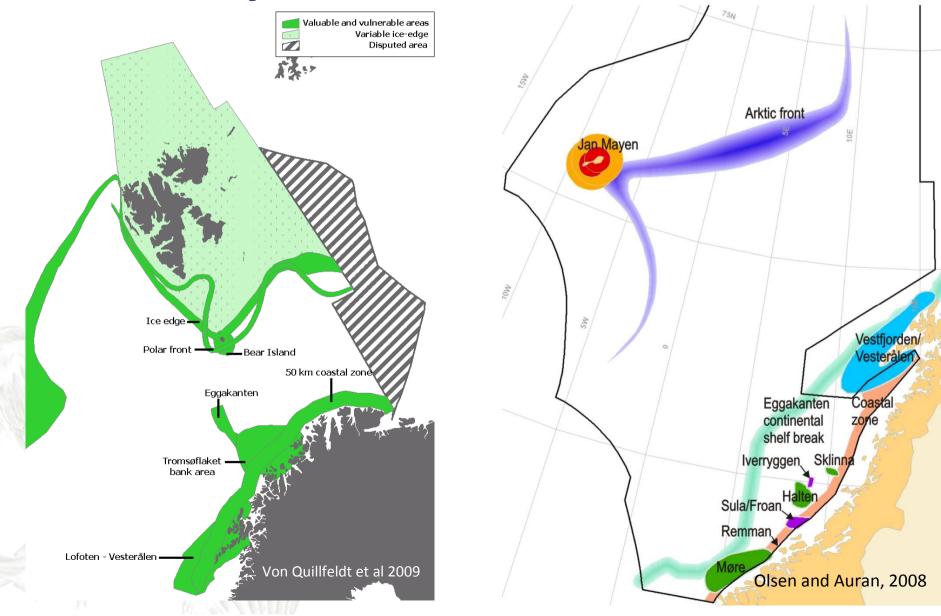

#### The science behind the plan

#### Some areas are more valuable than others

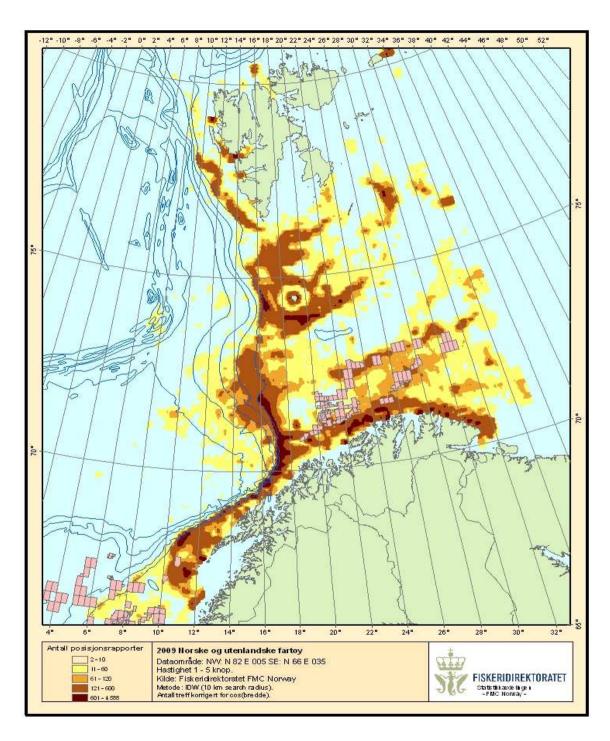

#### Particularly valuable and vulnerable areas

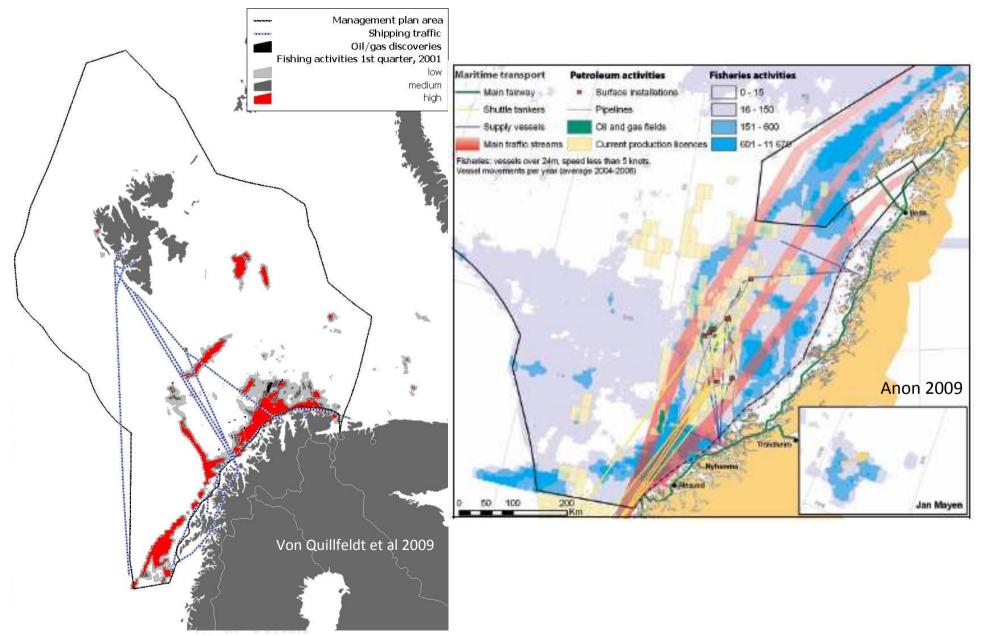

Fishing is the main impact factor, but with areaconflicts with oil/gas

VMS data for 2009 for vessels >21m
Pink blocks are areas opened for petroleum activities

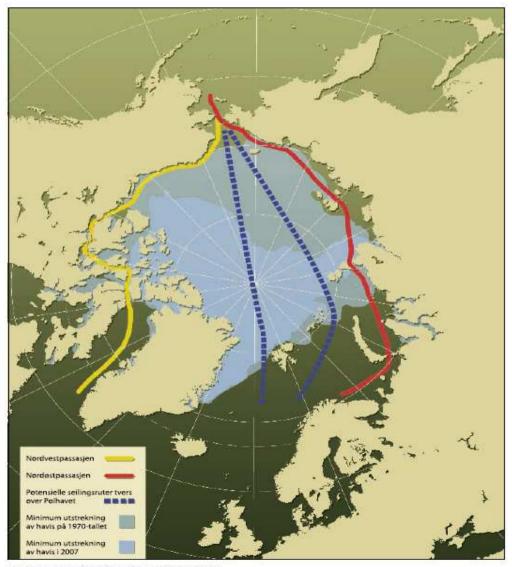

#### Human use of the areas

#### **Future increase in shipping?**

2008-2009

St.meld. nr. 15 Interesser, ansvar og muligheter 45

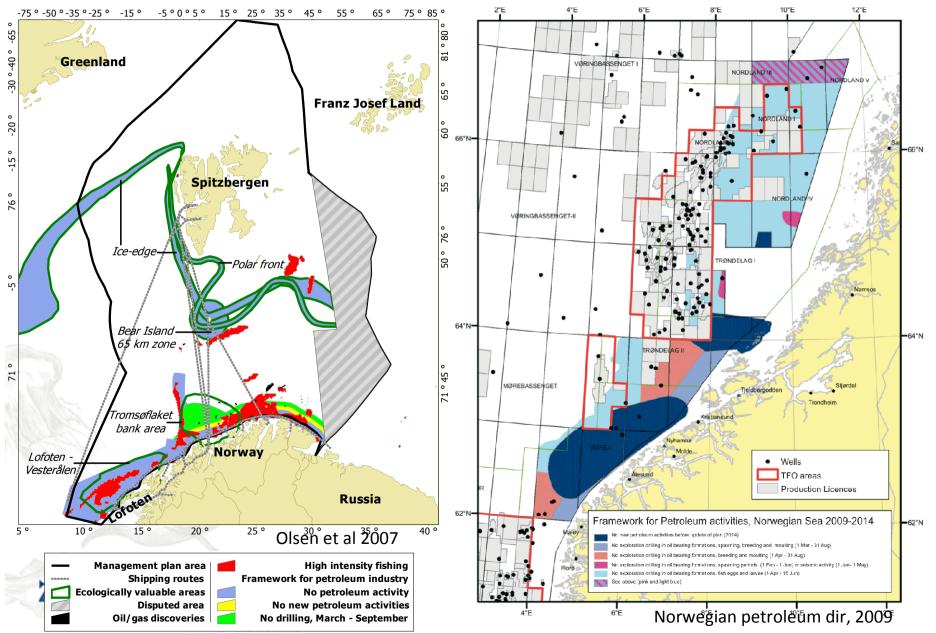

Figur 5.1 Issmelting i nord og transportruter

#### **Central themes**

- No legislation specifically for m. plans. Implemented through existing legislation
  - Marine Resource lav (Havressursloven) has been designed with this in mind
- New meeting places for advisors, managers and stakeholders
- Annual reporting of status (ecosystem, human use) and state of knowledge
- Development of an indicator-based reporting system (ecosystem state)
- Assessment of environmental risk
- Routing system for shipping
- Area-based management framework for petroleum

Photo: T. de Lange Wenneck

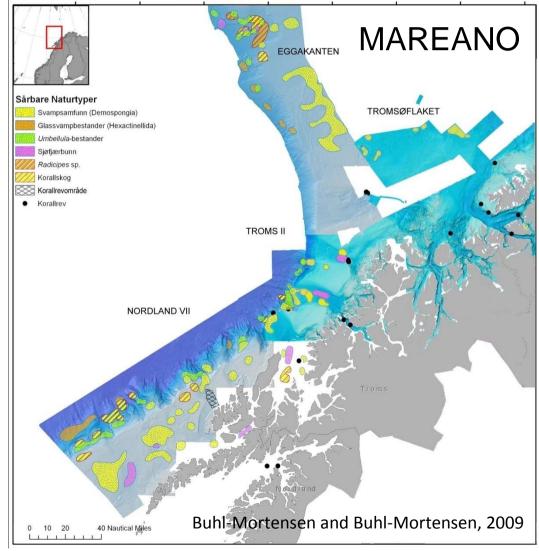

#### **Area-based management frameworks**

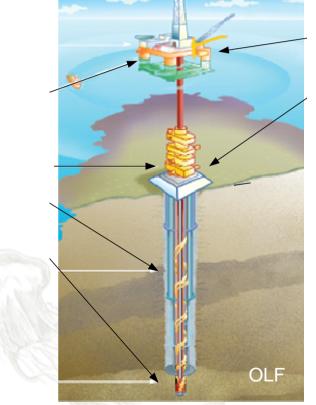

## Revision of the Barents Sea plan (2010/2011) – new knowledge

- MAREANO seabed mapping project
- Idenfication of vulnerable nature types (OSPAR)
- + many other projects

## Risks associated with oil/gas production

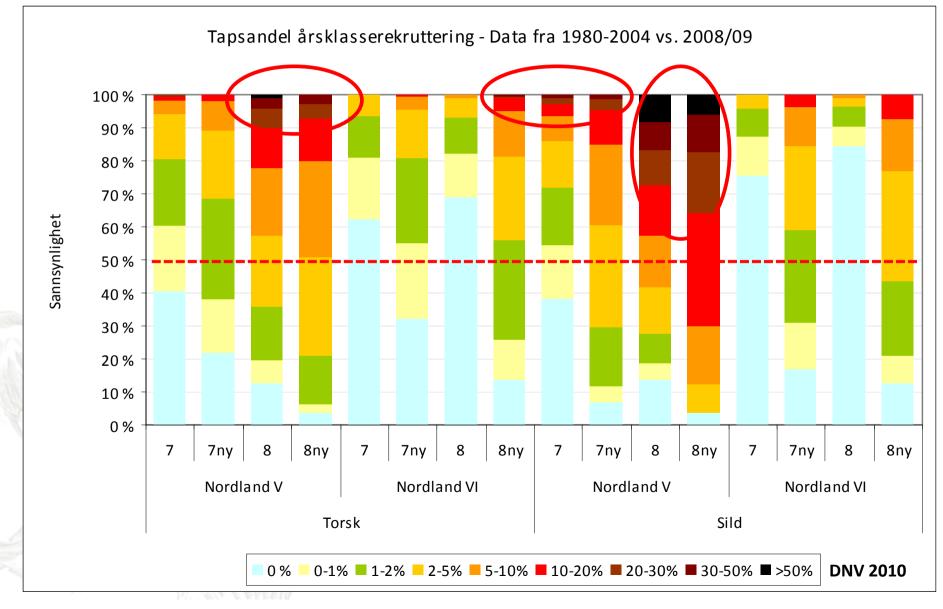

Production

Statoil

## New Knowledge: Assessing environmental risk of oil spills

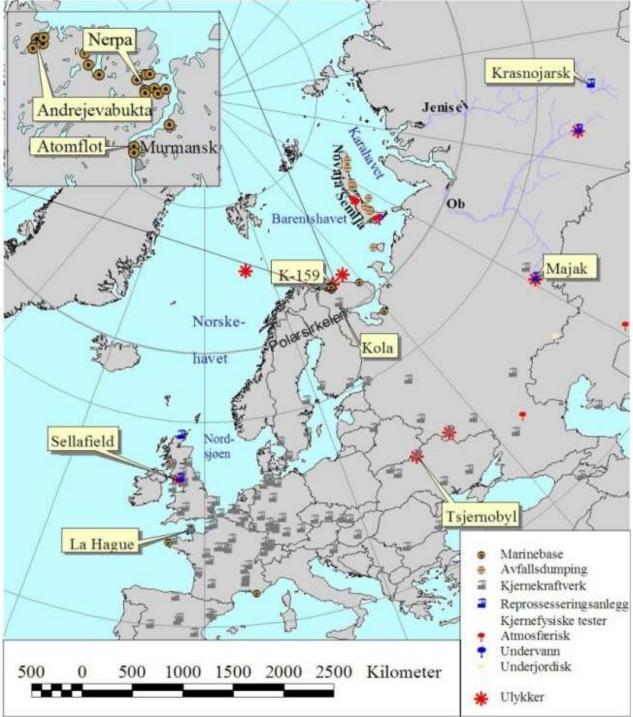

## New Events: Deepwater horizon blowout

- Duration: 87 d
- Total spill: 779 036 m<sup>3</sup>
- Spill rate: 8426–9857 m<sup>3</sup>d<sup>-1</sup>

# Radioactive pollution

## Key Scientific challenges for Norway's plans

- Effects of climate change and ocean acidification
- Environmental risks and consequences of human activities
- Effect of fisheries on benthic habitats
- Better understanding of trophic interactions in the system
- Defining and setting value to ecosystem components and habitats
- Assessing vulnerability, cumulative impacts and cumulative vulnerability

Photo: T. de Lange Wenneck

#### **Potential for improvements**

- STRUCTURAL / ORGANIZATIONAL:
  - Based on science, but need transparency and peer review
  - Improve sectoral cooperation, especially at ministerial level
  - Identifying and clarifying disagreements (between sectors) to improve decision-making and enhancing the scientific ethos
- SCIENTIFIC
  - Socioeconomic effects are not assessed although they are instrumental in the decision-making process
    - Economic impact on communities, region and nation should be better assessed

Photo: T.

de Lange Wenne

- Ecosystem services should be assessed
- Communication of uncertainties!

#### **Concluding remarks**

- The applicability of the Norwegian management plans to other countries can be questioned.
  - Norway is a small, homogenous and rich country.
  - Its central administration is highly concentrated and by international standards well coordinated.
  - Its research institutions are well funded and have substantial capacity to carry out the research for Integrated oceans management.
- Even under these conditions implementing MSP has been challenging!

#### Thank you for your attention!
