What is the most important element of maritime spatial planning to carry over for pearls in the vision?

How desirable is this vision for pearls by 2040?

What would be possible actions?

establish thematic networks

Transfer to policy and regulation

experience exchange btw pearls among the same group

Funding

there will be pearls that contribute from offshore wind energy developemnt - they developemnt should be included

Coastal belt of coastal Pearls

coherence between VASAB vision and national and regional visions

Innovation hubs

multi level governance

What would be possible actions?

transition from fishery pearls into energy / tourist pearls

Monitoring current plans, learning lessons.

Enhance networks between local, medium size towns; funding will be needed to ensure functioning cooperation platforms

Sea to fork thinking

fragile pearls - climate change threats

Funding

Monitoring obecnych planów, wyciąganie wniosków.

Monitoring current plans, learning lessons.

coastal pearls with maritime culture in heart - strengthening local Baltic identity

What would be possible actions?

Interconnectivity

Coordination of practical aspects

Coordination of different sustainable transport modes and accross borders

awareness of different seasons (ice, storms)

redundancy and resilience as keywords for systems design

What is the most important element of maritime spatial planning to carry over for strings in the vision?

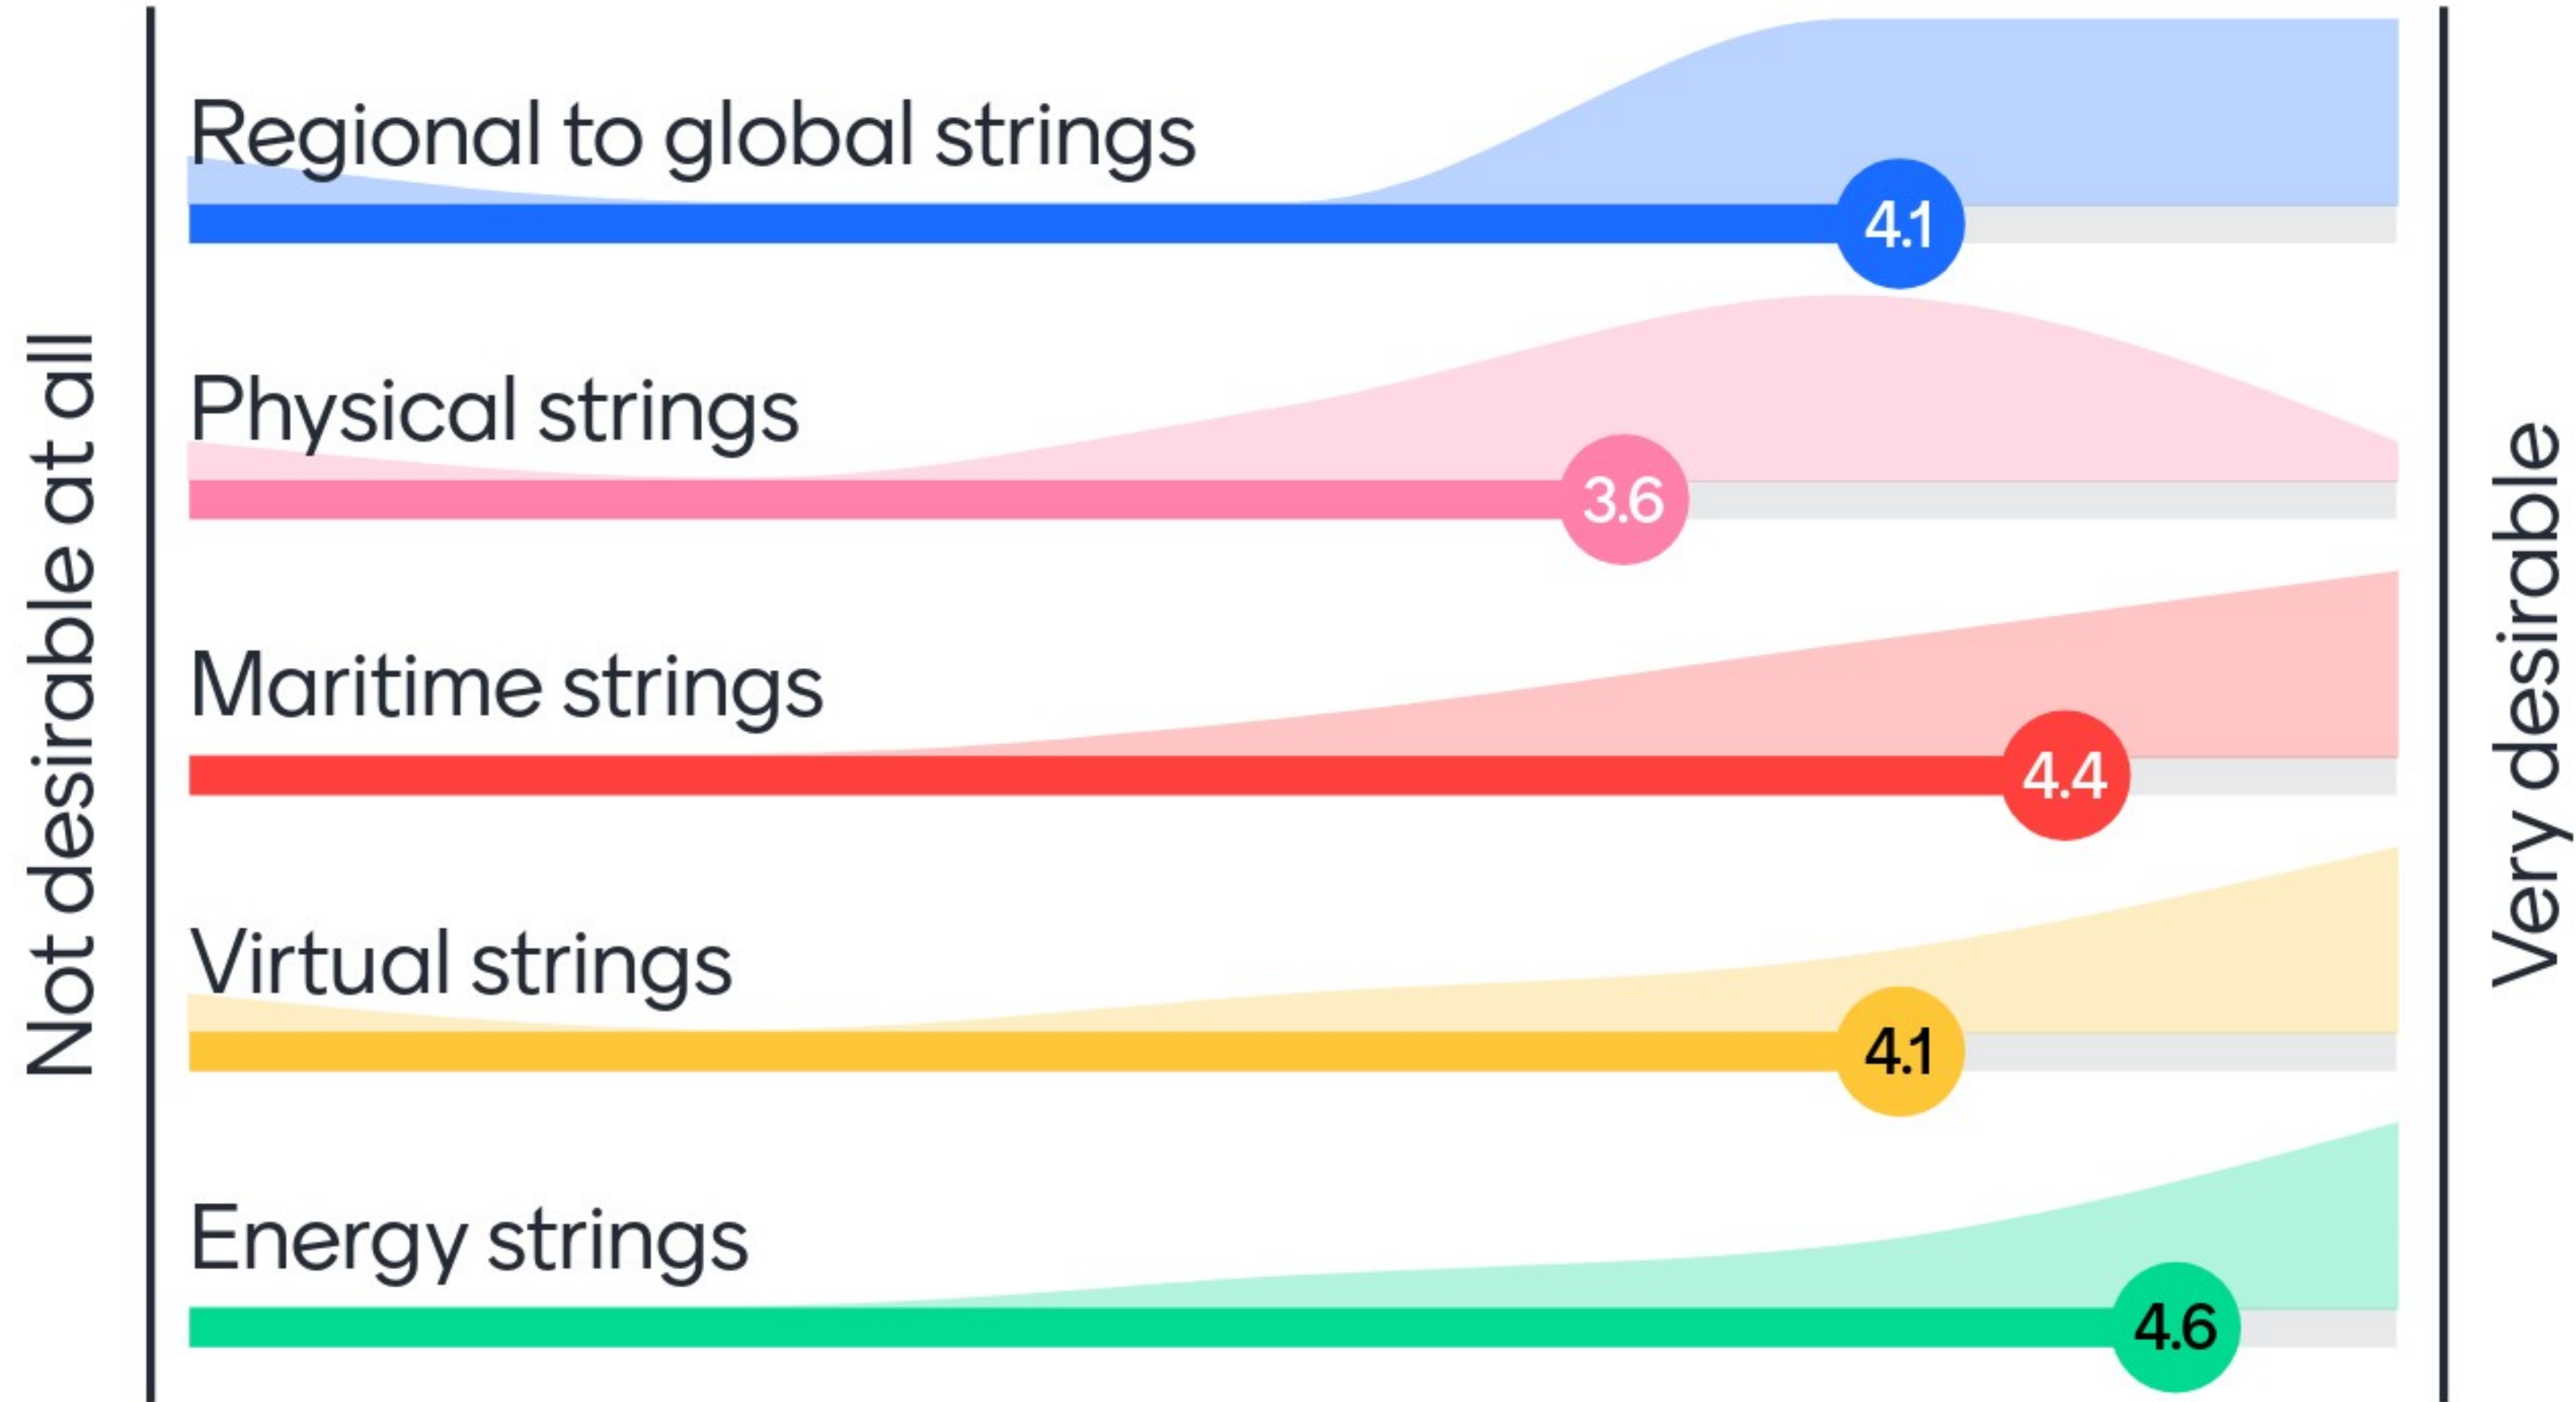

energy extraction

connections with land

coordination

green hydrogen production

How desirable is this vision for strings by 2040?

What would be possible actions?

coordination

redundancy design

less competition between countries :)

connectivity

MUST HAVE integration between strings and patched

Ecological corridors / green connectivity at sea

adaptive design

cross-border and transboundary coherence

collaboration

What would be possible actions?

land-sea integration

Practical connection of rail and ship transport
(timetables, crossing borders smoothly:
coordination, joint planning, procurement)

MSP has to address pearls, strings, patches and
system

what about the military strings? ;)

open space for the future

allowing seasonal difference

spatial planning providing spatial conditions for
energy extraction (offshore wind)

Pipelines and gas

open for future developments

What would be possible actions?

coexistence

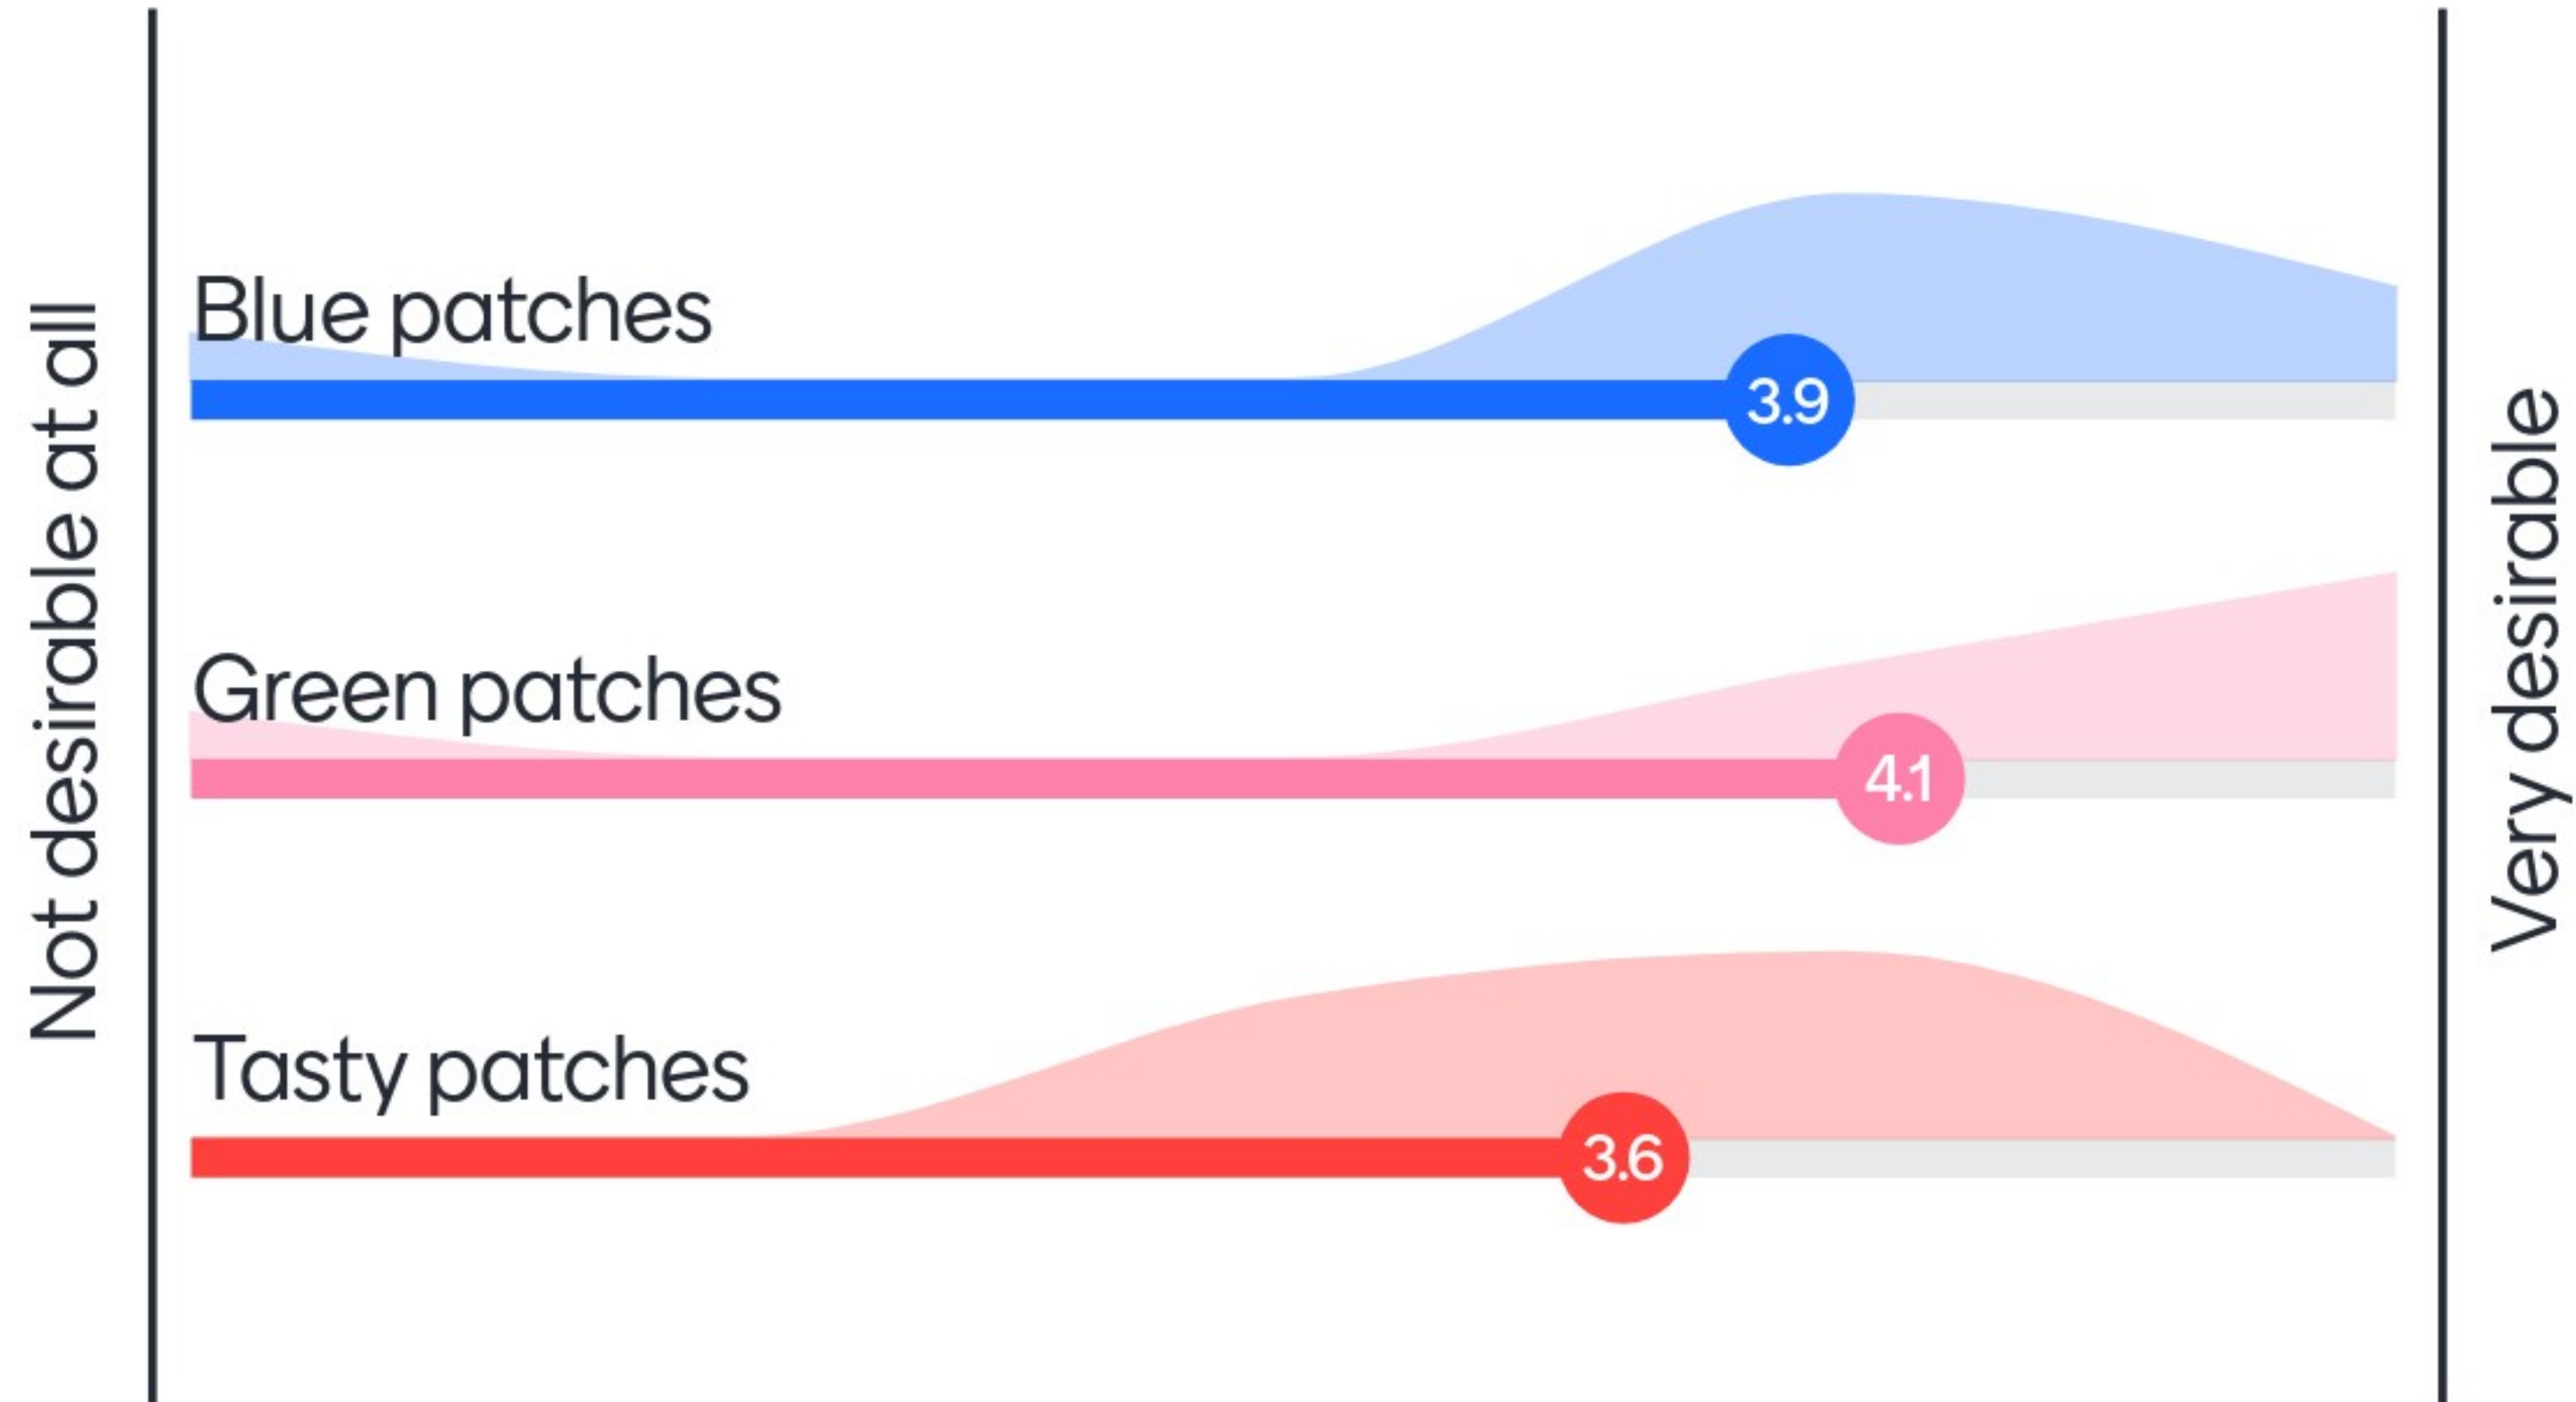

What is the most important element of maritime spatial planning to carry over for patches in the vision?

marine protected areas

flexible systems

integrative

How desirable is this vision for patches by 2040?

What would be possible actions?

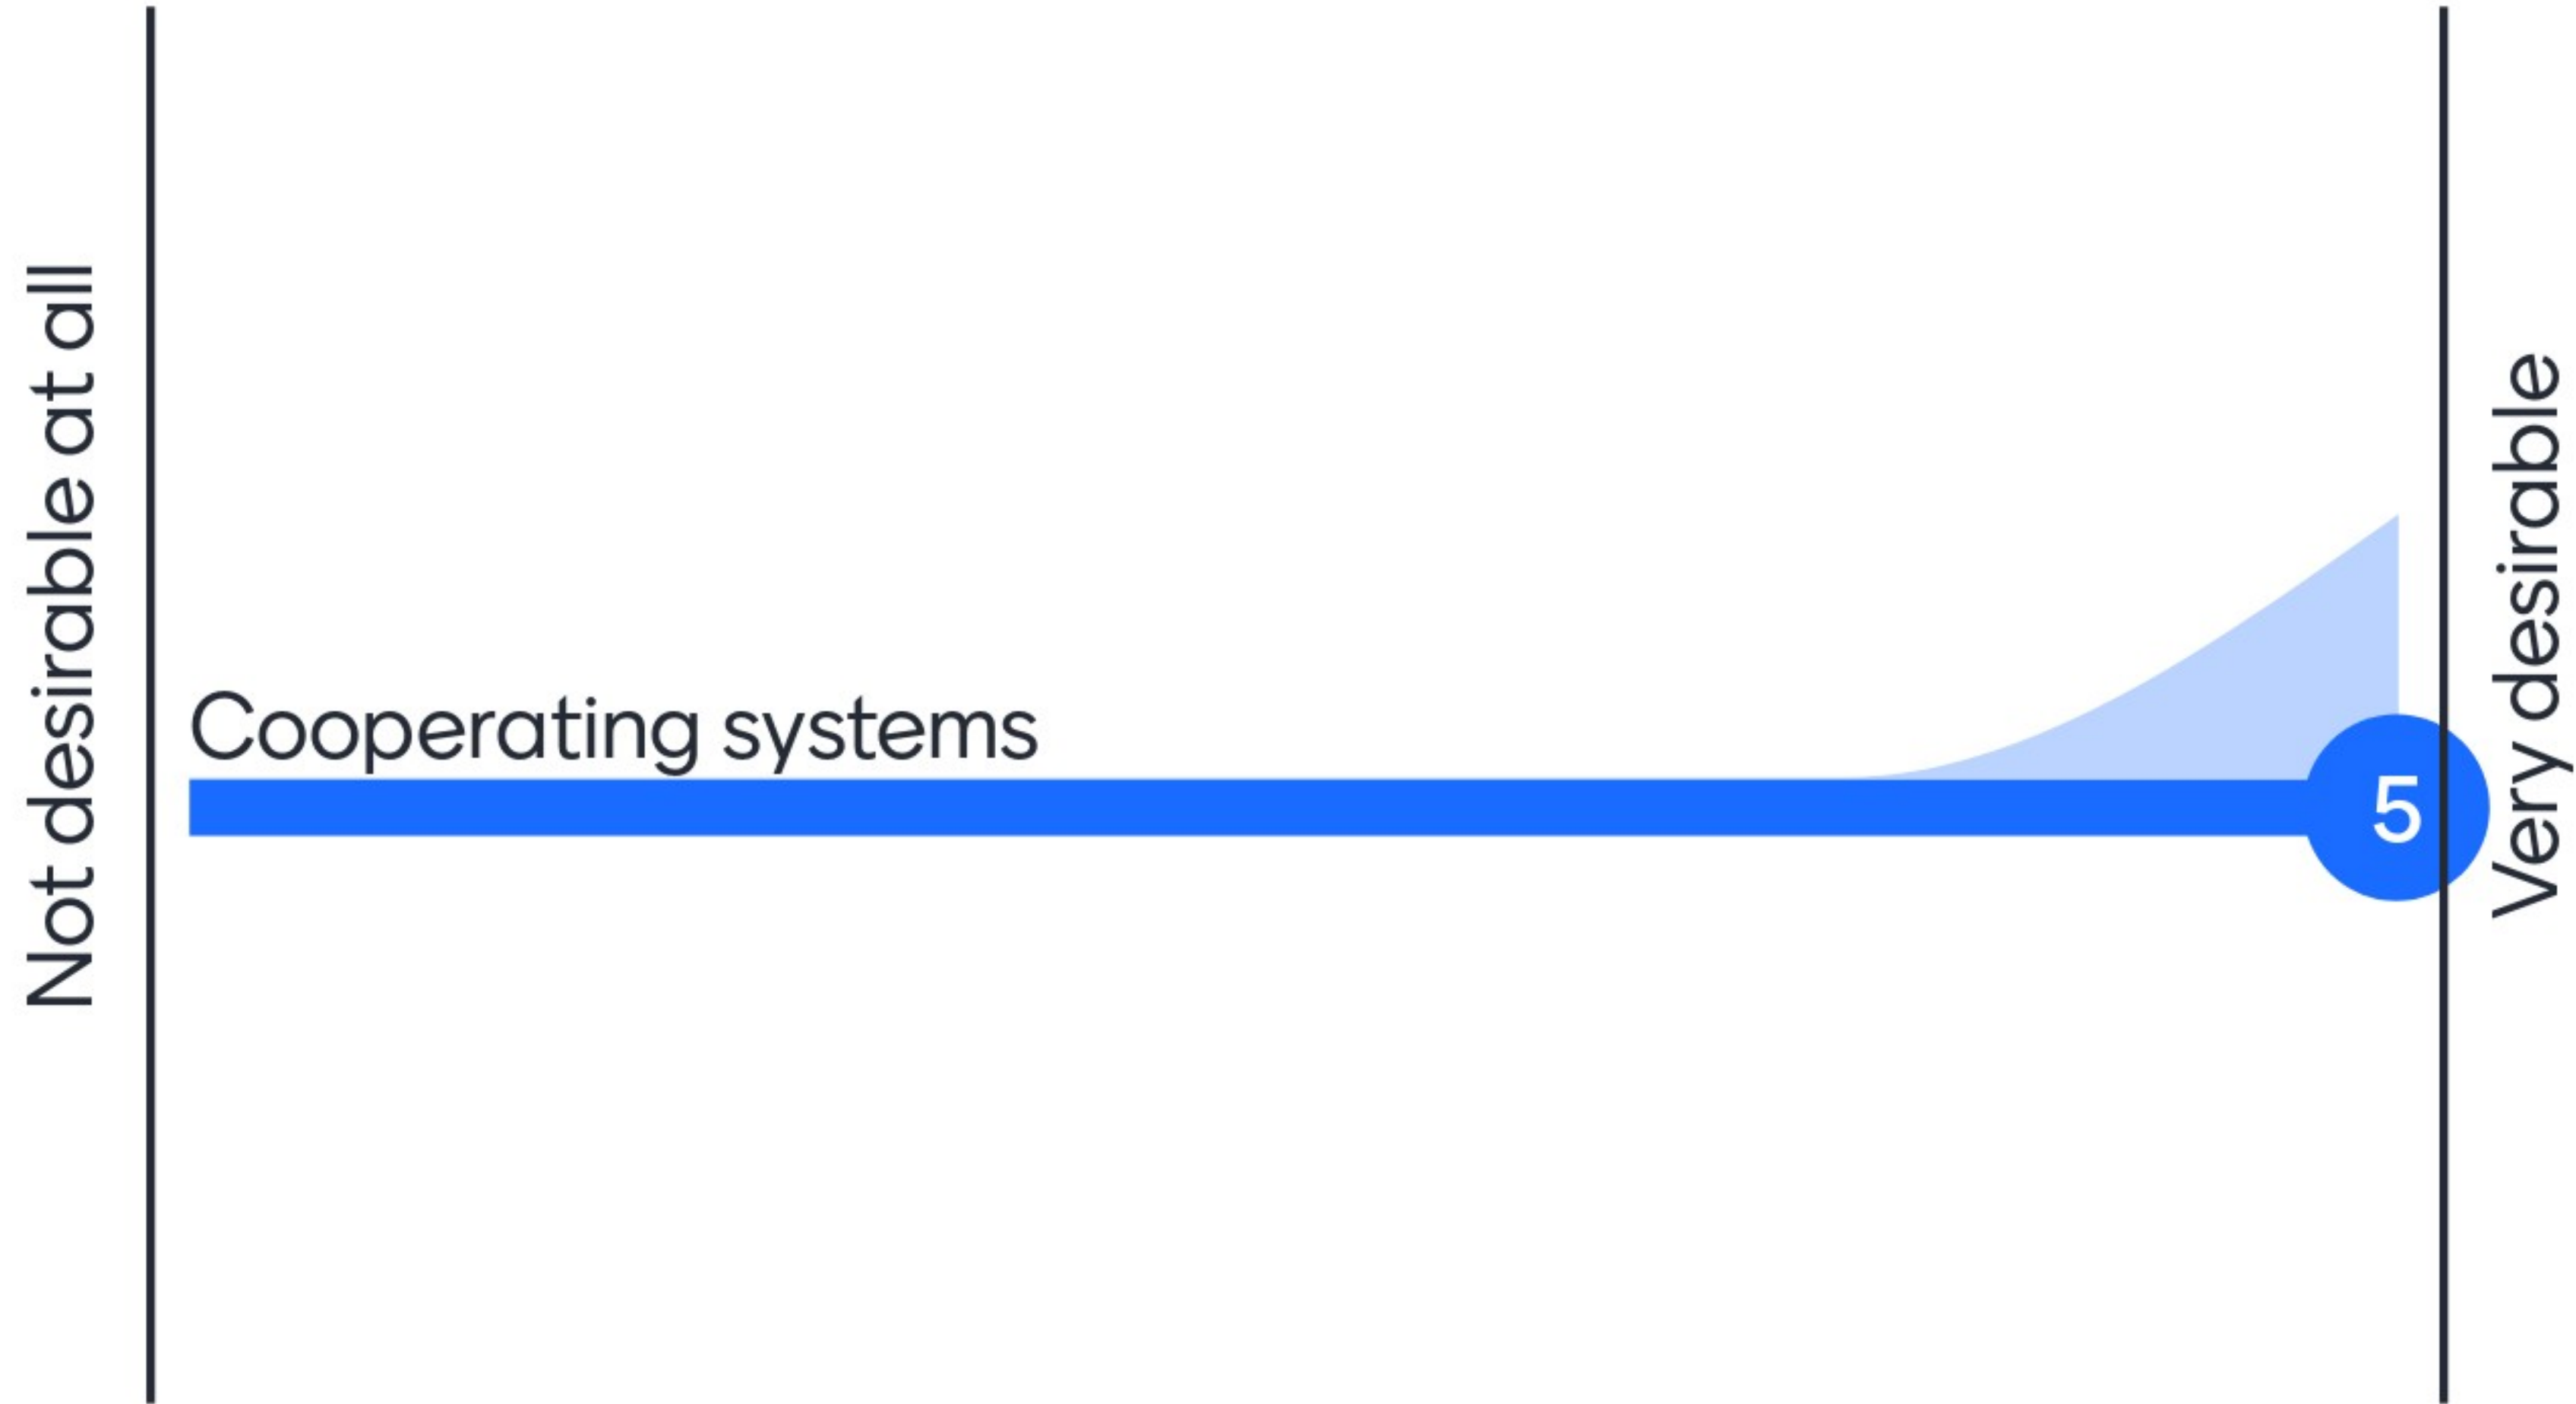

What is the most important element for maritime spatial planning to carry over for system in the vision?

multi-level governance

coherence

How desirable is this vision for system by 2040?

What would be possible actions?
